

Groupify Python Style Guide:

1. No digits in variable names or function names
2. Dictionaries returned by functions should have a separate line for each variable
3. Function definitions in controllers.py must use camelCase formatting.
4. Each function must have a comment above it explaining its general purpose.
5. No lines are beyond 100 characters long.
6. Functions using axios must be separated by GET and POST, no function should use both GET and POST.
7. Functions used to complete a user story should be placed one after another.
8. No lonely closing parentheses, each closing parenthesis must be on the same line as a variable.
9. Comments are placed above the piece of code being explained, not to the side.
10. Single line comments have a space after the hash mark.
